

TEXSOL X[®]

AGRICULTURAL EMULSIFIER

FPA Registration No: 242-407-2409

Texsol X is a non-ionic surfactant or surface active ingredient that facilitates and enhances the emulsifying, spreading, sticking, wetting or penetrating properties in spray oil.

Texsol X lowers the surface tension of spray droplets, thus increasing the spray coverage. It is added to spray oil to improve the performance of spray mixture. It is normally combined with spray oil to allow this oil to be mixed with water.

ADVANTAGES OF USING THIS PRODUCT:

- It is an all purpose surfactant and the most widely recommended.
- It assists the spray deposits to adhere to target area which can be measured in terms of resistance to time, mechanical and chemical action.
- It increases the area of droplet of a given volume of spray mixture.
- Economical than other types of surfactants

PHYSICAL PROPERTIES:

Component	Octyl phenoxy polyethoxy ethanol
Ionic Property	Non-Ionic
Appearance and Odor	Clear and viscous liquid
Density	1.032 - 1.040
Solubility	Soluble in Water and Solvents

A Quality product of:

TEXICON
